

## Contents

### Modules:

#### 1. Introduction

- Introduction of CPP programming
- Dev-C++ IDE Installation
- Compiling and running first Cpp program

#### 2. Basics of C++

- Structure of a program
- Main function
- Basic Input/Output
- Using Cin cout statements
- Variables.
- Data types.
- expressions
- Constants

#### 3. Operators

- Arithmetic operators
- Relational and logical Operators
- Comma operator
- Modulus operator
- Size of operator
- Terinary operator

#### 4. Control Structures

- Conditional statements
- If statement
- If-else,
- Else
- Switch statements

#### 5. Iterations

- While
- While statement
- Do-while statement
- For Loop
- Break
- Continue
- Goto

#### 6. Working with Functions

- Function definition
- Function prototype
- Function parameters
- Reference parameter
- Default arguments
- Function return

#### 7. Compound Data Types

- Arrays
- String manipulations

- Pointers
- Dynamic Memory
- Data Structures
- Other Data Types
- 8. Object Oriented Programming**
  - Oops concepts
  - Oops terminology
  - Classes and Objects,
  - new operator
  - this operator
  - Member variables
  - Member functions
  - Access specifiers
  - Constructors, Destructors
  - Polymorphism
  - Constructor overloading
  - Method overloading
  - Operator overloading
  - Friendship and inheritance
  - Base class
  - Derived class
  - Virtual functions and virtual classes
- 9. Advanced Concepts**
  - Files and streams
  - Dynamic Memory
  - Templates
  - Namespaces
  - Exceptions
  - Type Casting
  - Preprocessor directives

### Course Details:

- Course Duration : 1 Month.
- Training : Online
- Method: : Normal, Fast Track and Weekends Classes
- Course material : In PDF Format
- Prerequisites : HTML, knowledge of JavaScript
