

Contents

Module1 Basic C#:

1. Introduction

- Introduction of C# programming
- Visual studio IDE Installation
- Getting started with visual studio
- Creating Project
- Compiling and running first C# Program

2. Basics of C#

- Structure of a program
- Main function
- Using Output statement
- Variables.
- Data types.
- Type Casting
- Constants
- User Input

3. Operators

- Arithmetic operators
- Relational and logical Operators
- Comma operator
- Modulus operator
- Size of operator
- Ternary operator

4. Control Structures

- Conditional statements
- If statement
- If-else,
- Else
- Switch statements

5. Iterations

- While Loop
- For Loop
- Break/Continue

6. Working with Functions

- Methods
- Methods
- Method Parameters
- Method Overloading

7. Compound Data Types

- Arrays
- String manipulations
- Math
- Booleans

Module2: Advanced C#:

8. Object Oriented Programming

- OOps concepts
- OOps terminology
- Classes/Objects
- Class Members
- Constructors
- Access Modifiers
- Properties
- Inheritance
- Polymorphism
- Abstraction
- Interface
- Enums
- Files
- Exceptions

Course Details:

- Course Duration : 1 Month.
- Training : Online
- Method: : Normal, Fast Track and Weekends Classes
- Course material : In PDF Format
- Prerequisites : Any Programming knowledge(optional)
